A self taught software engineer, coming from a design background, I care about the crafting accessible user interfaces, demonstrating 4+ years of experience of working remotely with startups and individuals, I got a thirst for building impactful products that improves people's lives, addressing their pain points, building features, squashing critical bugs.

SKILLS

Languages: JavaScript/TypeScript, HTML/CSS

Tools: SQL, Unix Shell, Git/GitHub, Vite, VS Code, Copilot, Cypress, Storybook, Swagger, Hasura

Frameworks/Libraries: Bun/Elysia, Astro, Vue/Nuxt, React/Next, TailwindCSS

Database engines and Tooling: SQLite, Postgres, Supabase, Firebase, Turso

EXPERIENCE

Software Engineer | *FoodMarketHub, Malaysia - Remote* Nov. 2021 – Nov 2023

- Built the new version of the web application from scratch in 6 months with a team of 6 using Vue 3 with TypeScript and GraphQL eliminating customer pain points to over 5x fold and therefore reducing the churn rate by about 2 fold in the first quarter while also attracting more customers
- Majorly contributed to the rewrite of the application by building over 750+ components by a team of 2 using TailwindCSS and ElementPlus improving our delivery time by 1.5x
- Built Mobile PWA while addressing challenging and tricky UI's resulting in a better user experience
- Co-authored documentations and Storybook which significantly improved the on boarding experience
- Setup logging using Elasticsearch and fixed critical bugs in production improving the app's overall reliability and performance.

Software Developer Intern | *Clear (formerly ClearTax), Bangalore - Remote* Apr 2021 – Sep 2021

- Built interactive web pages in NextJS, some of them as a rewrite from Jekyll
- Built CMS pages in Webflow resulting in reduced dependency on technical team
- Implemented PWA to support offline functionalities using Workbox framework improving user experience in low latency scenarios
- Built automation tool using Puppeteer that scans 70k+ WordPress pages and make formatting changes on the fly
- Implemented Jenkins for the CI/CD flow ensuring consistent and reliable releases
- Optimized 70k+ Wordpress pages to improve performance by 4x fold resulting in faster page loads

Web Developer - Contractor | *Canopy, Singapore - Remote* 2020 – 2021

- Built internal tool using NextJS and Airtable's API aiding non-technical folks to build and deploy client portals using drag and drop UI components including charts thereby reducing dependency on the technical team
- Designed and built their website using Webflow CMS, integrated third party tools via webhooks
- Automated Website form submission using Pipedream to hit Hubspot CRM and start a sales funnel reducing about 15-20 minutes of effort from marketing team filling it manually
- Optimized their client's PHP web app and improved page load speed to 5x fold enhancing user satisfaction and engagement

RECENT PROJECT

Prep'd | *Production ready full stack app for chefs and recipes built using Nuxt 3, Bun and Postgres hosted on AWS*

- Built the frontend using Nuxt 3 with TypeScript, NaiveUI components with TailwindCSS, and utilising Pinia store
- Implemented the backend using Bun with Elysia Framework, Postgres for DB, GraphQL for APIs
- Setup authentication and role based access by utilising Lucia Auth
